/ North-East Community Awareness Plenary

www.viswapragnafoundation.org

THE GOAL OF **NECAP 2025**

The overarching goal of **NECAP 2025** is to foster awareness, acceptance, and action. By bridging the gap between scientific expertise and community understanding, we hope to:

- Dispel myths and misinformation about cancer and autism.
- Promote evidence-based approaches to treatment and support.
- Create a ripple effect of awareness by engaging individuals from diverse community streams.
- Build a support network for parents of autistic children to share resources, experiences, and encouragement.

NECAP 2025 is not just a conference; it is a movement for societal change. We are committed to creating a well-informed community that can challenge misconceptions, advocate for reliable information, and support one another in addressing these critical issues.

This plenary is being organized by a team of motivated individuals, including doctors, chartered accountants, NGOs, and other significant members of society, under the aegis of Viswapragna Foundation, a not-for-profit Section 8 organization based in Tezpur, registered under the Ministry of Corporate Affairs, Government of India. It is being conducted in collaboration with Tezpur College, Darrang College, Indian Society of Medical and Paediatric Oncology (ISMPO), the official society and National Body of Medical Oncologists of India & the Indian Society of Colposcopy and Cervical Pathology (ISCCP). This is truly a meeting by the people, of the people, and for the people.

ABOUT NECAP

The North East Community Awareness Plenary (NECAP) 2025 is an initiative by Viswapragna Foundation, aimed at fostering awareness and addressing critical societal issues related to Cancer and Autism. The plenary will be held on February 23, 2025, in Tezpur, Assam, and is designed to create a platform where scientific facts meet the community's curiosity, breaking myths and misconceptions for a healthier and informed society.

ADDRESSING MYTHS AND MISCONCEPTIONS ABOUT **CANCER**

Despite advancements in medical science, cancer remains a topic surrounded by myths and misconceptions. From the fear that a biopsy can spread cancer to the belief that diet alone can cure it, these unscientific notions persist. Such misinformation, often propagated by unreliable sources, leads to undue fear and delays in seeking proper treatment. It also complicates the work of scientific professionals who rely on evidence-based medicine.

NECAP 2025 aims to bridge this gap by bringing together some of the most experienced oncologists from institutions like Tata Memorial Hospital, Kidwai Memorial Institute, Apollo Chennai, AIG Hyderabad and other prestigious Institutions in India. These esteemed doctors and Scientists will directly interact with community members from various professions such as bankers, chartered accountants, police officers, teachers, lawyers, auto drivers, and vendors. This unique forum will allow participants to clarify their doubts, gain reliable knowledge, and help disseminate accurate information within their circles.

AUTISM AWARENESS: UNDERSTANDING AND ACCEPTANCE

The second focus of NECAP 2025 is on Autism Awareness. Autism, a developmental condition often misunderstood and overlooked, leaves many parents struggling to comprehend what it entails, how to approach their child's needs, and how to adjust their lives for their child's development. The lack of clarity and support can lead to disappointment and frustration.

To address these challenges, NECAP will host a parallel session on autism. This session will include child psychiatrists, psychologists, trainers, special school faculty, and, most importantly, parents of children with autism. The aim is to dispel myths, offer practical strategies for improvement, and foster a supportive network for parents. By sharing experiences and expert insights, the session will empower families to better train and support their children while fostering acceptance within society.

PLENARY AGENDA

ONCOLOGY

TIME
